

Akhil Birru

Senior Angular Developer | Full Stack: Java · Spring Boot · PostgreSQL | AI: Claude · RAG · Agents
Bengaluru, India | birruakhil1526@gmail.com | linkedin.com/in/akhil-birru | github.com/birruakhil1526

PROFESSIONAL SUMMARY

Senior Angular Developer with 5+ years of experience building production-grade web applications, including 3+ years of Angular (up to v21), TypeScript, and RxJS: lazy-loaded feature modules, reusable base-class architecture, role-based access, and performance tuning. Full stack background in Java / Spring Boot, PostgreSQL, and YugabyteDB to own features end to end, from API and database to UI. Strong hands-on experience with Claude, AI / ML, RAG, and agentic AI frameworks, building AI developer tools for test generation and bug resolution. Experienced in Agile / Scrum delivery.

KEY HIGHLIGHTS

- Develop complex Angular modules for an enterprise lending admin app with 65+ lazy-loaded features, built on reusable base classes for CRUD, maker-checker approval workflows, and role-based permissions.
- Built core Angular modules from the ground up, including secure Single Sign-On (SSO), and fixed performance bottlenecks to improve load times; led the frontend team as Lead Engineer.
- Full stack ownership of lending epics (LOS, LMS, LCS): Spring Boot on PostgreSQL / YugabyteDB through to Angular UI.
- Built AI developer tools on Claude (AiTDP) as agentic LLM workflows: unit test generation for Java, Angular, and Android, and automated bug detection and resolution.

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Trustt, Bengaluru

Oct 2024 – Present

- Build complex Angular UI for an enterprise lending platform (loans, savings, accounting): an admin app with 65+ lazy-loaded feature modules and reusable base classes for CRUD, maker-checker approval workflows, and role-based permissions.
- Deliver features across 3 fintech lending products – Loan Origination (LOS), Loan Management (LMS), Loan Collections (LCS) – and AiTDP, an in-house Claude platform.
- Own epics end to end: Spring Boot services and REST APIs on PostgreSQL and YugabyteDB, plus the Angular UI that uses them.
- AiTDP: independently designed and built an AI system that generates unit test cases for Angular, Java, and Android applications, delivered as editor plugins for developers.
- AiTDP: architected an LLM-based (Claude) workflow that automates bug detection and resolution, reducing manual debugging effort for the engineering team.
- Built and maintained scheduled CRON jobs in Spring Boot for automated backend batch processing.
- Work in Agile / Scrum sprints on Jira: planning, estimation, stand-ups, and retrospectives.

Software Developer | Maveric Systems, Bengaluru

Mar 2023 – Sep 2024

Project: Delivery Excellence Dashboard – platform for employees to report project status and feedback, with scoring and stakeholder tracking.

- Built responsive Angular interfaces from UX/UI wireframes and integrated RESTful APIs and third-party services.
- Designed and developed critical modules from the ground up, including secure Single Sign-On (SSO).
- Fixed performance bottlenecks and drove architecture decisions, improving load times, scalability, and maintainability.
- Led the frontend team for 3 months as Lead Engineer, delivering all planned tasks on schedule.
- Conducted code reviews and mentored junior developers on Angular best practices and coding standards.

Associate – Backend Developer | Accenture, Hyderabad

Apr 2021 – Oct 2022

Project: Inventory and supply-chain app for an international agricultural company – stock, transit, storage, and processing.

- Developed backend services and RESTful APIs in Java and Spring Boot for inventory, in-transit tracking, and material processing modules.
- Wrote SQL queries and data access logic for product stock, storage, and processing data.
- Worked closely with frontend developers and designers to define API contracts and integrate services end to end.

TECHNICAL SKILLS

Frontend: Angular (up to v21), TypeScript, JavaScript (ES6+), RxJS, Angular Material, Bootstrap, HTML5, CSS3, SCSS, ReactJS, Redux

Frontend Architecture: Lazy-loaded modules, reusable components and base classes, route guards, RBAC, SSO / authentication, performance optimisation

Frontend Testing: Karma, Jasmine, unit testing

Backend: Java, Spring Boot, RESTful APIs, Swagger, CRON / scheduled jobs, Node.js

Databases: PostgreSQL, YugabyteDB (distributed SQL), SQL, MongoDB

AI / ML: Claude (Anthropic API), LLM workflows, RAG (retrieval-augmented generation), agentic AI frameworks, AI agents, prompt engineering, AI developer tools

Tools & DevOps: Git, Jenkins, Docker, Jira, VS Code, IntelliJ

Practices: Agile / Scrum, sprint planning, system design, code reviews, mentoring

EDUCATION

B.Tech, Electronics and Communication Engineering

2015 – 2019

Christu Jyothi Institute of Technology and Science

AWARDS & ACHIEVEMENTS

- Certificate of Appreciation, Maveric Systems – for leading the frontend team.

CERTIFICATIONS

PGP Full Stack Software Engineering; Angular; Java; JavaScript; SQL
